

## Bio-Rad Korea Limited.

### Product Highlights

#### D-100 (Display)

- The D-100 system generate gold-standard HPLC results every 45 seconds with variant detection and no interference from common variants.
- The onboard Advisor provides flagged results in real-time, ensure nothing is missed while dramatically reducing hands-on time.
- With over 30 years of experience in HPLC testing, Bio-Rad has developed the most advanced solution for A1c analysis.
- The D-100 system simplifies high throughput A1c testing without sacrificing the high quality results that are critical to patient care.

#### IH-500 (Display)

- IH-500 is an innovative system that operates using 6-axis robot technology.
- Bio-Rad is the first company to introduce such technology in immunohematology testing.
- The fully-integrated, 6-axis, robotic transport arm offers new possibilities in sample and reagent handling throughout the process. Ultimately, results are delivered faster.
- Full freedom of movement of the robot arm further reduced manual hands-on time.
- This robust, secure and recognized technology is also maintenance free.
- IH-500 fully meets the requirements of the modern immunohematology laboratory.
