Product Highlights

Hitachi Automatic Analyzer “ Labospect 006” (Display)

Clinical Chemistry analyzers are required to ensure the quality of data, shorten TAT, miniaturize sample and reagents volumes, and further increase assays. Hitachi High-Technologies has developed LABOSPECT 006, a Clinical Chemistry analyzer that responds to the needs of laboratories to pursue high reliability and ease of use. As a reliable partner of the laboratory we will support the next generation testing at the forefront.

Hitachi Automatic Analyzer “ Labospect 008AS”

Laboratories need to be able to report analysis results quickly and accurately and handle a wide variety of assays. Labospect 008AS combine S module, which enables high-speed processing with cutting-edge technology such as twin high-speed aliquot arms and non-contact ultrasonic mixing and P module, which makes users easy to install reagents. Labospect 008AS performs high-speed processing (more than 2,000 tests per hour) making it easier to report measurement results quickly. Also the target system can be built to suit your needs.
