Shaping the values of ELISPOT in laboratory medicine: Application in IGRA

Kyoung Un PARK, Yun Ji HONG

Department, Department of Laboratory Medicine, Seoul National University College of Medicine Institution, Korea

Currently, there are two types of interferon-gamma release assays (IGRAs) in use for the detection of tuberculosis (TB) infection, T-SPOT.TB and QuantiFERON-TB.

We aim to show the value of ELISPOT in laboratory medicine and to explain the application of ELISPOT in IGRA in this Education Workshop (EW) 11.

The EW will be composed of two parts, “Introduction to ELISPOT” by professor KU Park and “ELISPOT application in IGRA” by professor YJ Hong.
